

COMMUNICATING TO PATIENTS IN TRANSPLANT CONSULTATIONS

We are looking for PATIENTS to VOLUNTEER to help us design an online tool that will communicate risks and statistics to transplant assessment patients

Who are we looking for? People who have had a consultation with their doctor or nurse where they have had to make the decision about listing for lung transplantation.

What are we hoping to do? We want to find out how to communicate risk and other statistics to patients and how they feel about it. We will use this to produce a website that will calculate and display statistics personalized to each person

What would you need to do? We would like to discuss with you privately, (a short interview) how you feel about the way statistics are communicated, and how you think things might be improved.

The Winton Centre at Cambridge University and the national adult lung transplant centres (Papworth, Harefield, Queen Elizabeth, Freeman and Wythenshawe) are running a project to create a web based calculator to help transplant patients understand risk and benefits of listing.
